

Question				Marking details	Marks available					
					AO1	AO2	AO3	Total	Maths	Prac
	(c)			there is no trend in the melting points of the non-metals / the elements preceding chlorine accept description e.g. there is a decrease in melting point from Si to P, then an increase from P to S and then another decrease from S to Cl neutral answer – melting point is unpredictable			1	1		
	(d)	(i)		liquid (1) award (1) for any of following only if first mark is awarded 60 °C is <u>between</u> its melting point and boiling point - melting point is below 60 °C and boiling point is above 60 °C 60 °C is <u>between</u> 44 °C and 281 °C - phosphorus has already melted at 60 °C but has not reached its boiling point neutral answer – its melting point is 44 °C and its boiling point is 281 °C			2	2		
		(ii)		$\boxed{3} \text{ Zn} + \boxed{2} \text{ H}_3\text{PO}_4 \longrightarrow \text{Zn}_3(\text{PO}_4)_2 + \boxed{3} \text{ H}_2$		1		1	1
