8				Indicative content - carbon dioxide level in the atmosphere increases - this traps more heat in the atmosphere - the Earth's temperature is rising - melting polar ice / glaciers leads to increased sea levels and flooding - extreme weather such as hotter summers / colder winters / more hurricanes - habitat changes are caused by changes in climate 5-6 marks Global warming clearly explained including the idea of increase in carbon dioxide trapping more heat; two consequences described <i>There is a sustained line of reasoning which is coherent, relevant, substantiated and logically structured. The candidate uses appropriate scientific terminology and accurate spelling, punctuation and grammar.</i> 3-4 marks Global warming explained with link between carbon dioxide and increase in temperature; reference to two consequences <i>There is a line of reasoning which is partially coherent, largely relevant, supported by some evidence and with some structure. The candidate uses mainly appropriate scientific terminology and some accurate spelling, punctuation and grammar.</i> 1-2 marks Reference to increasing temperature; reference to one consequence <i>There is a basic line of reasoning which is not coherent, largely irrelevant, supported by limited evidence and with very little structure. The candidate uses limited scientific terminology and inaccuracies in spelling, punctuation and grammar.</i> 0 marks <i>No attempt made or no response worthy of credit.</i>	6			6
