					AO1	AO2	AO3	Total	Maths	Prac
6				Indicative content - scale that measures strength of an acid/alkali - pH 7 is neutral - lower than pH 7 acidic - higher than pH 7 alkaline - acid strength decreases from 1 to 6 - alkali strength increases from 8 to 16 - pH values given by colour seen using universal indicator - battery acid ⇒ red ⇒ pH 1 ⇒ strong acid - milk ⇒ yellow ⇒ pH 6 ⇒ weak acid - water ⇒ (pale) green ⇒ pH 7 ⇒ neutral - drain cleaner ⇒ purple ⇒ pH 14 ⇒ strong alkali 5-6 marks Good description of all aspects of scale; correct description of pH of substances <i>There is a sustained line of reasoning which is coherent, relevant, substantiated and logically structured. The candidate uses appropriate scientific terminology and accurate spelling, punctuation and grammar.</i> 3-4 marks Description including reference to acids, alkalis and neutral substances; correct description of pH of two substances <i>There is a line of reasoning which is partially coherent, largely relevant, supported by some evidence and with some structure. The candidate uses mainly appropriate scientific terminology and some accurate spelling, punctuation and grammar.</i> 1-2 marks Reference to acids, alkalis or neutral substances; colours linked to pH <i>There is a basic line of reasoning which is not coherent, largely irrelevant, supported by limited evidence and with very little structure. The candidate uses limited scientific terminology and inaccuracies in spelling, punctuation and grammar.</i> 0 marks <i>No attempt made or no response worthy of credit.</i>	2	4		6		6
