

9. (a) The diagram shows a model of the cell used in the extraction of aluminium from molten aluminium oxide.

Examiner
only

The overall equation for the reaction is shown below.

Aluminium oxide contains Al^{3+} and O^{2-} ions.

Explain, in terms of these ions, the formation of both products. Include electrode equations to support your answer. [6 QER]

- (b) Apart from a workforce and local transport infrastructure, explain **one** other important factor when choosing a site for an aluminium extraction plant in the UK. [2]
