8.	(a)	(i)		$4\text{CuFeS}_2 + 10\frac{1}{2}\text{O}_2 \rightarrow 4\text{Cu} + 2\text{FeO} + \text{Fe}_2\text{O}_3 + 8\text{SO}_2$		1		1		
		(ii)		$1s^2 2s^2 2p^6 3s^2 3p^6 3d^{10} 4s^1$	1			1		
		(iii)		$M_r \text{ CuFeS}_2 = 183.5$ (1) $\% \text{ Cu} = \frac{1.3}{100} \times \frac{63.5}{183.5} \times 100 = 0.45 \%$ (1)		2		2	1	
		(iv)		Cu reduced oxidation number changes from +1 to 0 (1) S oxidised oxidation number changes from -2 to +4 (1) O reduced oxidation number changes from 0 to -2 (1)		3		3		
	(b)			strong acid is one that fully dissociates in aqueous solution (1) concentrated acid consists of a large quantity of acid and a small quantity of water (1)	2			2		
	(c)	(i)		moles NaOH = $0.0125 \times 0.0159 = 1.988 \times 10^{-4}$ (1) concentration acid = $\frac{1.988 \times 10^{-4}}{0.025} = 7.95 \times 10^{-3} \text{ mol dm}^{-3}$ (1)		2		2	1	2
		(ii)		if pH = 2.10 then $[\text{H}^+] = 7.94 \times 10^{-3} \text{ mol dm}^{-3}$ (1) since this is the same as the concentration of the acid, it must have fully dissociated (and teacher is correct) (1)			2	2	1	

Question				Marking details	Marks available					
					AO1	AO2	AO3	Total	Maths	Prac
	(d)	(i)		colour change from yellow-green to blue (1) the system will try to minimise this effect by using up the water and so the position of equilibrium moves to the left (1)			2	2		2
		(ii)		colour changes from blue to yellow-green (1) the system opposes the change by taking in heat so the position of equilibrium moves in the endothermic direction (1)			2	2		2
