

SECTION B

Answer all questions in the spaces provided.

9. Calcium chloride is an ionic solid that is used as a drying agent due to its ability to absorb water and form a range of hydrated crystals.

(a) The Born-Haber cycle below shows the formation of calcium chloride from its elements.

All values shown are standard enthalpy changes and are given in kJ mol^{-1} .

- (i) Give the value of the standard enthalpy change of atomisation of chlorine. [1]

..... kJ mol^{-1}

- (ii) Calculate the standard enthalpy of lattice formation of CaCl_2 . [2]

$\Delta_{\text{latt form}} H^\theta = \text{..... } \text{kJ mol}^{-1}$

- (iii) A student incorrectly states that the second ionisation energy of calcium is 1735 kJ mol^{-1} as this is the energy needed to form $\text{Ca}^{2+}(\text{g})$ in the Born-Haber cycle.

Suggest a possible value for the second ionisation energy of calcium, giving a reason for your answer. [2]

- (b) The reaction occurring when calcium chloride is used as a drying agent is shown below.

- (i) A laboratory manual suggests a **minimum** temperature of 200 °C to remove all the water from the hydrated calcium chloride. At this temperature the reaction occurring is as follows.

A student calculates the enthalpy change when calcium chloride becomes dehydrated as 78.0 kJ mol⁻¹.

Assuming that this data is correct, calculate a value for the entropy change when calcium chloride becomes dehydrated at this temperature. [3]

$$\Delta S = \dots\dots\dots \text{JK}^{-1} \text{mol}^{-1}$$

- (ii) In the drying process 5.20 g of hydrated calcium chloride forms 3.15 g of anhydrous calcium chloride.

Calculate the value of x in the original $\text{CaCl}_2 \cdot x\text{H}_2\text{O}$. [3]

$$x = \dots\dots\dots$$

- (iii) State the colour observed in a flame test using calcium chloride. [1]

.....

- (c) Calcium halides react with concentrated sulfuric acid in a similar manner to sodium halides.

State the observation(s) when concentrated sulfuric acid is added to calcium chloride and calcium bromide. Explain why the observations are different. [3]
