

3. A student investigates the pigments found in some fruit and vegetables.

She obtains some coloured extracts from carrots, tomatoes and beetroot.

She places a spot of each extract on chromatography paper, along with spots of the three pigments beta-carotene, chlorophyll and betalain.

The diagram shows the chromatogram at the end of the experiment.

- (a) Give the names of **all** the substances which are **not** mixtures. Give a reason for your choice. [1]

Substances

Reason

- (b) Put a tick (✓) in the boxes next to the **two** conclusions that can be drawn from the chromatogram. [2]

chlorophyll is not present in carrot, tomato or beetroot extracts

☐

beta-carotene is present in carrot extract but not present in tomato extract

☐

both beta-carotene and betalain are present in beetroot extract

☐

betalain is present in tomato extract but not present in carrot extract

☐

both carrot and beetroot extracts contain a pigment other than beta-carotene, chlorophyll and betalain

☐

- (c) One of the pigments present in the carrot extract has travelled 4.4 cm above the start line.

The solvent front has travelled 8.0 cm. Calculate the R_f value of the pigment using the following equation. [2]

$$R_f = \frac{\text{distance travelled by pigment}}{\text{distance travelled by solvent front}}$$

$R_f =$

- (d) Give the reason why there is a spot remaining on the start line in the chromatogram for beetroot. [1]
