Examiner only

6. The table shows some properties of aluminium, copper and titanium.

Metal	Melting point	Electrical conductivity	Thermal conductivity	Density	Resistance to corrosion
aluminium	high	good	good	low	good
copper	high	good	good	high	good
titanium	high	good	good	low	good

Describe how **these** properties are linked to the uses of aluminium, copper and titanium.

You should **not** give more than two uses for any one metal. [6 QER]
