11.	(a)	(i)		Indicative content • add acid (not sulfuric/hydrochloric) to prove if carbonate present • if fizzing/effervescence carbonate present • if carbonate present, add acid until no more fizzing • divide solution into two (accept divide solution before adding acid) • add barium chloride to one half • precipitate shows that sulfate is present • add silver nitrate to other half • precipitate shows that chloride is present	2	2	2	6		6
				5-6 marks Devises a plan with relevant observations and conclusions that unambiguously shows that one, two or three anions are present. <i>The candidate constructs a relevant, coherent and logically structured method including all key elements of the indicative content. A sustained and substantiated line of reasoning is evident and scientific conventions and vocabulary are used accurately throughout.</i> 3-4 marks Devises a plan with relevant observations and conclusions that shows that two or three anions could be present. <i>The candidate constructs a coherent account including most of the key elements of the indicative content. Some reasoning is evident in the linking of key points and use of scientific conventions and vocabulary are generally sound.</i> 1-2 marks Devises a simple plan with some observations and conclusions that shows that one of the anions could be present. <i>The candidate attempts to link at least two relevant points from the indicative content. Coherence is limited by omission and/or inclusion of irrelevant material. There is some evidence of appropriate use of scientific conventions and vocabulary.</i> 0 marks <i>The candidate does not make any attempt or give an answer worthy of credit.</i>
