11.	(a)			Empirical formula percentage oxygen = 35.6 C : H : O = $\frac{53.3}{12} : \frac{11.1}{1} : \frac{35.6}{16}$ (1) = 4.44 : 11.1 : 2.22 = 4 : 10 : 2 $\Rightarrow$ C₂H₅O (1) Mass spectrum <i>M</i>_r = 90 (1) molecular formula C₄H₁₀O₂ (1) any fragment linked to m/z (1) IR O—H peak at 3200-3550 (1) NMR 3 hydrogen environments (1) Potassium dichromate(VI) X is 1° alcohol, 2° alcohol or aldehyde (1) Sodium carbonate (carboxylic) acid not formed so X must be 2° alcohol / oxidised to ketone (1) X is butane-2,3-diol / unambiguous formula (1)	1	1 <
