					AO1	AO2	AO3	Total	Maths	Prac
	(d)			percentage of mass lost from graph = $\frac{5.40 - 4.73}{5.40} \times 100 = 12.4\%$ (1) percentage 'mass lost' in $M_r = \frac{28}{225} \times 100 = 12.4\%$ equation must be correct as the values are the same (1) accept same reasoning using 'remaining mass' ⇒ 87.6% <i>alternative method</i> moles of barium ethanedioate = $\frac{5.4}{225} = 0.024$ (1) moles of barium carbonate = $\frac{4.73}{197} = 0.024$ same number of moles therefore 1:1 stoichiometry (1)			1
