

8. Ammonia is manufactured from hydrogen and nitrogen in the Haber process.

- (a) The equation shows the bonds which are broken and the bonds which are formed in the production of ammonia.

The bond energy of a H—H bond is 436 kJ. The energy needed to break **all** the bonds in the **reactants** is 2253 kJ.

- (i) Calculate the energy needed to break a N≡N bond. [2]

Energy = ..... kJ

- (ii) The diagram below is the energy profile for the reaction.

Calculate the energy released when **all** the bonds in the ammonia molecules are formed. [1]

Energy = ..... kJ

- (b) The table below shows the percentage yield of ammonia under different pressure and temperature conditions.

| Pressure<br>(atm) | Temperature (°C)            |      |      |      |
|-------------------|-----------------------------|------|------|------|
|                   | 200                         | 300  | 400  | 500  |
|                   | Percentage yield of ammonia |      |      |      |
| 100               | 81.7                        | 52.5 | 25.2 | 10.6 |
| 200               | 89.0                        | 66.7 |      | 18.3 |
| 400               | 94.6                        | 79.7 | 55.4 | 31.9 |
| 1000              | 98.3                        | 92.6 | 79.8 | 57.5 |

- (i) Describe the relationship between the percentage yield of ammonia and the temperature.

[1]

- (ii) **Circle** the most likely percentage yield of ammonia if the process were carried out at 200 atm and 400 °C.

[1]

20 %

30 %

40 %

50 %

- (c) A student carries out a series of chemical tests on solutions of three unknown compounds, **A**, **B** and **C**. Her results are recorded in the table.

| Compound | Flame test  | Add NaOH(aq)                                           | Add HCl(aq)                         | Add BaCl <sub>2</sub> (aq) | Add AgNO <sub>3</sub> (aq) |
|----------|-------------|--------------------------------------------------------|-------------------------------------|----------------------------|----------------------------|
| <b>A</b> | no colour   | pungent gas given off turns damp red litmus paper blue | no reaction                         | no reaction                | white precipitate forms    |
| <b>B</b> | green flame | blue precipitate forms                                 | no reaction                         | white precipitate forms    | no reaction                |
| <b>C</b> | lilac flame | no reaction                                            | gas given off turns limewater milky | no reaction                | no reaction                |

Use the information provided to identify compounds **A**, **B** and **C**.
