				OR He needs: $\frac{160000}{160} \text{ (1)}$ =1000 tonnes (1) No of cows = $\frac{1000}{3} \text{ (1)}$ =333.3 so he hasn't got enough cows (1) OR 120 × 3 = 360 tonnes of waste. 1 tonne 160kWh so 360 × 160 = 57 600kWh electricity he needs 160 000 kWh so not enough electrical energy produced to run his farm OR 160 × 3 (1) = 480 kWh per cow (1) 120 × 480 = 57 600 kWh (1) 160 000 – 57 600 = 102 400 extra needed so not enough (1) Accept conclusion based on candidate answer ecf
