

6. Sioned reacted sulfuric acid with zinc oxide (ZnO).  
She followed the method below to form zinc sulfate.

1. Pour 50 cm<sup>3</sup> of 1.0 mol/dm<sup>3</sup> sulfuric acid into a conical flask.
2. Heat the sulfuric acid to 50°C.
3. Add 5 g of zinc oxide to the warmed acid and stir.
4. Repeat step 3 until the zinc oxide is in excess.

- (a) The main hazard in this experiment is that 1.0 mol/dm<sup>3</sup> sulfuric acid is an irritant.

- (i) Describe **one** risk associated with using sulfuric acid.

[1]

.....

.....

- (ii) State a suitable control measure Sioned should carry out to reduce this risk.

[1]

.....

.....

- (b) Circle the correct formula in each bracket to complete the symbol equation for this reaction.

[2]

- (c) State **two** additional steps that Sioned needs to carry out to obtain pure zinc sulfate crystals.

.....

- (d) Robert has calculated the relative formula mass of zinc oxide to be 97.  
Use the Periodic Table on page 20 to explain if he is correct.
