

8. (a) Copper can be extracted from the mineral chalcopyrite. The mineral is smelted by heating with air. The equation for this reaction is as follows.

- (i) Balance the equation above. [1]
- (ii) Give the full electronic configuration of a copper atom. [1]

-
- (iii) A sample of rock contains 1.30 % by mass of chalcopyrite. Assuming this is the only source of copper in the rock, calculate the percentage by mass of copper in the sample. [2]

Percentage = %

- (iv) During the smelting Cu_2S is produced. This is collected and blown with air to produce copper.

This is classified as a redox reaction. Use oxidation numbers to explain which elements have been oxidised and which reduced. [3]

.....

- (b) Sulfur dioxide can react with oxygen and water to form sulfuric acid. Although sulfuric acid is a strong acid, it does not have to be a concentrated acid.

Explain the difference between the terms *strong acid* and *concentrated acid*. [2]

.....

.....

.....

- (c) (i) A student was given an aqueous solution of an acid HX and was asked to find out if it was a strong or weak acid. 25.0 cm^3 of the acid HX required 15.90 cm^3 of $0.0125\text{ mol dm}^{-3}$ sodium hydroxide solution for complete neutralisation.

Calculate the concentration of the acid. Assume that HX reacts with the sodium hydroxide in a 1:1 molar ratio. [2]

Concentration = mol dm^{-3}

- (ii) A teacher measured the pH of the aqueous solution and found it to be 2.10. She told the student that the acid in the solution must be a strong one. Is she correct? Justify your answer. [2]

.....

- (d) The commonest complex ion that copper forms in solution is the hexaaquacopper(II) ion, $[\text{Cu}(\text{H}_2\text{O})_6]^{2+}$. If concentrated hydrochloric acid is added to a solution containing hexaaquacopper(II) ions a new complex forms as the following equilibrium is established.

The forward reaction is endothermic.

- (i) State and explain what you would observe on adding water to the equilibrium mixture. [2]

.....

.....

.....

- (ii) State and explain what you would observe on heating the equilibrium mixture. [2]
