

SECTION A*Answer all questions in the spaces provided.*

1. Draw the **skeletal** formula of 2-bromo-3-methylbutane. [1]

2. Write the equation that corresponds to the standard molar enthalpy change of formation of magnesium carbonate, MgCO_3 . [2]

.....

3. The compounds shown below have the same molecular formula.

**A****B**

State which of these compounds can exist as *E-Z* isomers.

Explain your answer and name the isomer.

[2]

.....

.....

.....

Name of isomer

4. Halogenoalkanes are hydrolysed by aqueous sodium hydroxide. State and explain which of 1-fluoropropane, 1-chloropropane and 1-bromopropane is hydrolysed most rapidly. [2]

.....

.....

.....

5. (a) State the type of polymerisation involved when 2-fluorobut-2-ene, $\text{CH}_3\text{CF}=\text{CHCH}_3$, forms a polymer. [1]

.....

- (b) Draw **one** repeat unit of the polymer formed when 2-fluorobut-2-ene is polymerised. [1]

6. Complete the equation for the formation of ethanol by the fermentation of glucose. [1]
