

- (ii) Calculate the initial rate of reaction for the reaction catalysed by the copper(II) ions. [2]

rate = s^{-1}

- (iii) Each catalysed reaction contained the same number of moles of catalyst at the beginning of the reaction. Calculate the moles of catalyst left at the end of the reaction. [1]

moles = mol

- (c) Increasing temperature and the addition of a catalyst are two ways of increasing the rate of a reaction.

Using your knowledge of the Boltzmann distribution and particle theory, explain how the rate of reaction is increased using these two different methods.

You may use a diagram(s) to support your answer.
