

3. (a) The diagrams below show three methods of separating mixtures.

- (i) A student was given a solution of sodium chloride. State which method, **A**, **B** or **C**, he could use in order to obtain a sample of pure water from the solution. Explain how the method works. [3]

Method

Explanation

- (ii) 500g of solution was found to contain 43g of sodium chloride. Calculate the percentage of sodium chloride in the solution. [2]

Percentage = %

- (b) Group 7 ions, chloride, bromide and iodide, can be identified using silver nitrate solution.

Complete the following table to show the colours of the precipitates produced by these ions. [2]

Group 7 ion	Colour of precipitate
chloride	white
bromide	
iodide
