

3. (a) The chart below shows the melting points and boiling points of some Group 1 metals. The data for potassium is missing.

Tick (✓) the box that shows the melting point and boiling point values for potassium which fit the trends shown in the chart. [1]

melting point = 40 °C
boiling point = 600 °C ☐

melting point = 60 °C
boiling point = 780 °C ☐

melting point = 20 °C
boiling point = 600 °C ☐

- (b) The diagrams show lithium, sodium, potassium and rubidium, **but not necessarily in that order**, reacting separately with cold water.

**A**

Violent reaction with sparks spitting out of the trough

**B**

Gentle fizzing

lilac flame

**C**

Metal ball melts, moves around on the surface and burns

**D**

Metal ball fizzes and moves around on the surface

- (i) Use the information in the diagrams to give the **letter** which represents:

[2]

lithium

sodium

potassium

rubidium

- (ii) Caesium lies below rubidium in Group 1. Suggest how its reaction with water would be different from those above. [1]

.....

- (iii) Describe **one** safety precaution taken when adding a Group 1 metal to water. [1]

.....

- (c) Group 1 metals react with oxygen to form metal oxides.

Sodium oxide contains the ions Na^+ and O^{2-} .

Underline the correct formula of sodium oxide.

[1]

- (d) Group 1 metals react with chlorine, Cl_2 , to form metal chlorides.

Give the **letter** for the balanced symbol equation for the reaction between sodium and chlorine.

[1]

Letter
