

4. (a) Dilute hydrochloric acid reacts with sodium thiosulfate to make the products shown in the equation.

- (i) Use the equation to work out the formula of sodium thiosulfate. [1]

Formula

- (ii) The symbol (aq) in the equation tells us that the substances are aqueous. What is meant by this? [1]

.....

- (iii) The rate of this reaction can be studied as shown in the diagram.

Use information **from the equation** to explain why the cross disappears. [2]

.....

.....

.....

- (b) A student studied the effect of temperature on the rate of this reaction. He obtained the following results.

Temperature (°C)	Time taken for cross to disappear (s)			
	1	2	3	Mean
15	130	128	129	129
30	53	53	53	53
45	21	29	23	24.3
60	7	7	6	6.7

- (i) Another student said that one of the mean values was incorrect. Identify the incorrect mean. Give your reasoning. [2]

.....

.....

.....

- (ii) State what conclusion can be drawn about the effect of temperature on the rate of this reaction. Explain your conclusion using particle theory. [3]
