

7. (a) Potassium has three stable isotopes – ^{39}K , ^{40}K and ^{41}K .

(i) Compare the nuclei of each of these isotopes. [1]

.....

.....

.....

(ii) Use the information to calculate the relative atomic mass, A_r , of potassium.

Record your answer to **three** significant figures. [3]

Isotope	Relative isotopic mass	% in sample
^{39}K	39	93.1
^{40}K	40	0.0122
^{41}K	41	6.88

$$A_r = \frac{(\text{mass} \times \% \text{ isotope 1}) + (\text{mass} \times \% \text{ isotope 2}) + (\text{mass} \times \% \text{ isotope 3})}{100}$$

$$A_r = \dots\dots\dots$$

(b) Lithium lies above potassium in the Periodic Table.

- (i) Give **two** similarities and **two** differences between the reactions of potassium and lithium with water. [2]

.....

.....

.....

.....

.....

.....

- (ii) Write a balanced symbol equation for the reaction between potassium and water. [3]

.....
