

(b) Diagrams 1-5 show the electronic structure of five elements in the Periodic Table.

Give the **number** of the diagram which shows the electronic structure of the element which lies

(i) directly **below**  in the Periodic Table, [1]

(ii) to the **left** of  in the Periodic Table. [1]

(c) Nitrogen has two stable isotopes – nitrogen-14 and nitrogen-15.

Describe how these isotopes are similar to one another and how they are different. [2]
