					AO1	AO2	AO3	Total	Maths	Prac
7	(a)			microwaves	1			1		
	(b)			Indicative content: The Steady State Theory suggests that the Universe is always expanding with matter being continuously created to form new stars and galaxies to fill in the gaps Evidence The wavelength of the early radiation in the form of short wavelength/high energy radiation (gamma rays) has become longer wavelength / stretched (microwave) radiation. This is CMBR that presently pervades the Universe. Cosmological redshift means that light stretches as space expands. In fact, it stretches so much that by the time light gets to us from distant galaxies, absorption spectra from them show that black lines have moved to the red end of the spectrum. Both of the above support the Big Bang theory.	6			6
