

7. Hydrogen carbonate indicator can be used to measure the rate of respiration.

Concentration of carbon dioxide (%)	Colour of hydrogen carbonate indicator
less than 0.04	purple
0.04 (normal concentration in air)	red
greater than 0.04	yellow

The apparatus below can be used to compare the rate of respiration in small animals.

A group of students used different respiring organisms and recorded the time taken for the hydrogen carbonate indicator to turn yellow. The apparatus was kept at a constant temperature of 20 °C.

The results are shown in the table below.

Organism	Time taken for the hydrogen carbonate indicator to turn yellow (min)
earthworm	22
woodlouse	18
grasshopper	10
mouse	3

Examiner
only

(a) Explain why the hydrogen carbonate indicator changed colour in this experiment. [2]

.....

.....

.....

.....

(b) Give **two** reasons why the hydrogen carbonate indicator turned yellow fastest with the mouse. [2]

.....

.....

.....

.....

(c) The experiment was performed at a temperature of 20 °C. [2]

State **two** other variables that need to be controlled when comparing the respiration rates of different organisms.

.....

.....

(d) Describe how you would set up a control for this experiment and state the expected result. [3]

.....

.....

.....

.....

.....
